"reasoning": "We need to output Selenium Java code to extract the given DOM elements, but not use ID if the value has number in it. The IDs have numbers: createLeadForm_companyName (no number), createLeadForm_lastName (no number), createLeadForm_firstName (no number), ext-gen630 (has number). So we should not use ID for ext-gen630, but can use ID for others? The instruction: \"Do not use ID if the value has number in it.\" So for IDs containing numbers, avoid using ID. ext-gen630 contains number, so use other locator (e.g., By.cssSelector, By.xpath). For others, IDs have no numbers, can use By.id.\n\nWe need to \"Extract the below given DOM\" meaning locate these elements? Provide code to find them and maybe interact? Provide Selenium Java code only, no explanations.\n\nWe'll write code snippet: WebDriver driver = new ChromeDriver(); then locate elements:\n\nWebElement companyName = driver.findElement(By.id(\"createLeadForm_companyName\"));\nWebElement lastName = driver.findElement(By.id(\"createLeadForm_lastName\"));\nWebElement firstName = driver.findElement(By.id(\"createLeadForm_firstName\"));\nWebElement submitButton = driver.findElement(By.cssSelector(\"input.smallSubmit[name='submitButton'][value='Create Lead']\"));\n\nOr use xpath: //input[@type='submit' and @class='smallSubmit' and @value='Create Lead']\n\nWe'll output only Java code. Probably include imports.\n\nLet's produce final answer."
